- ICAT installed and running (details: Jürgen)

  - Current plan: only for open access data

    - No concrete plan to host all petra3 data in icat

    - The oa ICAT will also serve as a platform to re-evaluate

  - Basic requirement: PI can alter acl's at any time

    - Seems a major obstacle so far

  - Essentially no data ingested yet

    - Problem: open access = published data, but few meta-data recorded

    - Chicken-Egg: don't invest effort for a scarcely filled data catalogue

  - Annotation and ingest of derived data via web-frontend

    - Access control through umbrella & basic (door)

    - WebDAV export
