IDS Server 1.8.0 - main changes

- Workaround for oracle planning bug
- Make the implementation of getSize much more efficient.
- Make isPrepared more efficient.
- Ensure that Tidier action runs at high priority.
- Plugins need a slightly different interface - hence the move to 1.8.0
- File checker for Datasets no longer generates an error for an empty Dataset
- Add list of failed restores to the information returned by getServiceStatus.
- Avoid marking files as unavailable when unsure
- The prepareData call resets flags marking previous restore failures.
